Epping Forest Visitor Survey 2011

Results Summary

Results Summary

Introduction

In 2010 City of London (CoL) began to carry out two new types of visitor survey. The observation surveys are enabling us to calculate a best ever estimate of how many visits are being made to Epping Forest, the type of people who are and are not visiting, the activities they engage in and which parts of the Forest are well and less well used. The questionnaire surveys are helping us to understand more about where our visitors are coming from, which sites they choose to visit most often and their suggestions for how the Forest and their experience of it could be improved. The surveys are providing the City of London Corporation with information that helps them to manage the Forest in such a way that protects its special qualities whilst at the same time ensuring that as wide a range of people as possible can experience those special qualities.

This is a summary report of the 2011 visitor survey results. It includes some comparisons with the 2010 results. The 2011 questionnaire survey was responded to mainly by people living close to the central and southern boundaries of the Forest. The sample was answered by slightly more females than males, but a smaller proportion of people in the under 20 and over 65 age groups and from minority ethnic groups, than lived in the 2km catchment around the Forest's boundaries (according to the 2001 Census statistics).

Full details of the observation and questionnaire surveys can be obtained from the Branching Out project team at CoL.

Number of visits in 2011 = 4.7 million

For the observation survey, staff and volunteers counted and mapped the location of 3,015 visitors across six sites over 50 hours during the summer of 2011. With the addition of the survey figures for the five sites observed in 2010, we now have observed visit figures for 11 of the 29 discrete sites that make up Epping Forest (see Table 1). The 2011 results have allowed us to amend our original estimates for the remaining 18 sites, according to whether they are likely to receive very low, low, medium, high or very high numbers of visits.

Table 1: Estimate of Total Forest Usage 2011 (excluding special events and web hits)

Site Name	Popularity Rating	Est. Annual No. Visits	Observed usage pa	Comment
Ambresbury Banks	1	74,547	74,547	2010 Survey Route
High Beach/Pillow Mounds	4	279,062	279,062	2010 Survey Route
Wanstead Park	3	216,906	216,906	2010 Survey Route
Connaught Water	3	205,469	205,469	2010 Survey Route
Chingford Plain	3	229,376	229,376	2010 Survey Route
Wanstead Flats	5	395,263	395,263	2011 Survey Route
Hollow Ponds	5	429,420	429,420	2011 Survey Route
Fairmead Bottom & Almshouse Plain	4	256,740	256,740	2011 Survey Route
Bury Wood	3	166,680	166,680	2011 Survey Route
Loughton Camp	1	63,195	63,195	2011 Survey Route
Lower Forest	1	30,540	30,540	2011 Survey Route
Bushwood & Reservoir Wood	2	100,000		2012 Survey Route
Highams Park & Hatch Plain	3	200,000		2012 Survey Route
Pole Hill	2	100,000		2012 Survey Route
Yardley Hill & Yates Meadow	2	100,000		2012 Survey Route
Barn Hoppitt	3	200,000		2012 Survey Route
Strawberry Hill Pond Area	2	100,000		2012 Survey Route

Wake Valley	2	100,000		

Great Monk Wood	2	100,000		
Hangboy Slade & Jacks Hill	2	100,000		
St Thomas's Quarter	2	100,000		
Warren Plantation	1	<75,000		
Epping Thicks	2	100,000		
	TOTAL	4,472,198	2,347,198	11 sites (2010-11)

Assigned level of use:

Very low level of use	1	<75,000
Low level of use	2	100,000
Medium level use	3	200,000
High levels of use	4	300,000
Very high levels of use	5	>325,000

Our aim is to complete observation surveys on all 29 sites by 2014 and to repeat the survey on sites where there have been major capital investments in recent years so as to be able to check whether these investments have increased the diversity of their visitors, and particularly those who have found it difficult to visit the Forest in the past.

To the combined total of these (actual and still estimated figures (4,472,198) we have added the number of people we know to have attended events and activities and visited the website during 2011 (256,585 - see Table 2), to calculate our latest rounded down estimate of 4.7 million visits.

Table 2: Visitor Statistics for 2011

Details	Visits
170 events	11,900
Visits to the Field Studies Centre	23,000
Events led by the Centenary Trust	3,600
Discovering Epping Forest sessions	4,500
Visits to Queen Elizabeth's Hunting Lodge	23,219
Visits to the Epping Forest Visitor Centre	28,560
Visits to The Temple	12,218
HLF Forest Introduction Events	701
Volunteers (234 in roles + 145 one-off volunteer workdays)	379
Visits to Chingford Golf Course	24,000
Football (last year + 750 from summer tournaments)	73,414
Web hits	51,094
TOTAL	256,585

Table 3 provides a summary of some of the usage findings from the six sites observed in 2011.

Table 3: Observation survey results at six sites in summer 2011

	Visits pa	Busiest times	Spread	Car parking capacity
Bury Wood	166,680	mid-morning & mid afternoon	On paths	Adequate at Bury Road
Fairmead	256,740	mid-late afternoon	On paths	Inadequate at Hill Wood at weekends Adequate at Fairmead Oak. Fairmead Turnaround rarely used
Hollow Pond	429,420	mid-late afternoon	On paths to the south of Hollow Pond and across the grasslands to the east	Adequate at the Lakeside Diner, sometimes busy at the Forest School and Snaresbrook Road, but inadequate during the afternoons at the Boat House.
Loughton Camp	63,195	mid afternoon at weekends	On paths and mostly in the northern part of the site	Adequate at Mount Pleasant
Lower Forest	30,540	late afternoon	Mainly on paths but also around the car park and lake	Adequate at The Woodyard
Wanstead Flats	395,263	later afternoon and evenings	Across the site	More than adequate at Jubilee Pond and Centre Road Alexandra Lake was closed

Among the more heavily wooded sites in the Forest, Bury Wood was used more than others such as Ambresbury Banks and Loughton Camp. The figure for Wanstead Flats, whilst the second highest, does not take into account the many thousands of league footballers and their spectators who make use of the site during the football season. This figure should therefore be considered to be a significant under-estimate, even though we also observed a substantial number of people playing football informally during the summer off-season when the 2011 survey was carried out.

The annual visits to Hollow Pond were similarly higher than expected and made this site the most popular of all 11 sites observed so far.

Mid afternoons and (in some of the most popular sites) late afternoons proved to be the busiest times and particularly so at weekends. Weekend use was two to three times higher than during the week at most of these sites. Hollow Ponds was almost as popular during the week as at weekends, perhaps in part reflecting the use of the refreshment facilities and car parks by the lake for passing business people, bikers and school run families.

Spread

The patterns of use observed in 2010, whereby people tended to stick to the paths through the more heavily wooded sites and beside lakes, but were happy to spill out over the grasslands, was confirmed by the patterns of use observed at the 2011 sites.

The map of Loughton Camp in Fig.1 overleaf shows how use is concentrated in the northern part of the site (closest to the car park at Mount Pleasant and the facilities at High Beach) and along the rides. The relatively low numbers observed in the southern section, which had been assumed to be a major gateway into the Forest for people from Loughton, was a surprise, as was the lack of people visiting the ancient monument itself.

Fig 1 All visitors to Loughton Camp

Fig 2 All visitors to Hollow Pond

The pattern of use at Hollow Pond in Figure 2 clearly shows the intense concentration of large numbers of visitors around the southern shores of the lake, across the grasslands to the east and along the paths. It also shows far fewer visitors along the northern shores and all the way northwards up to Snaresbrook Road.

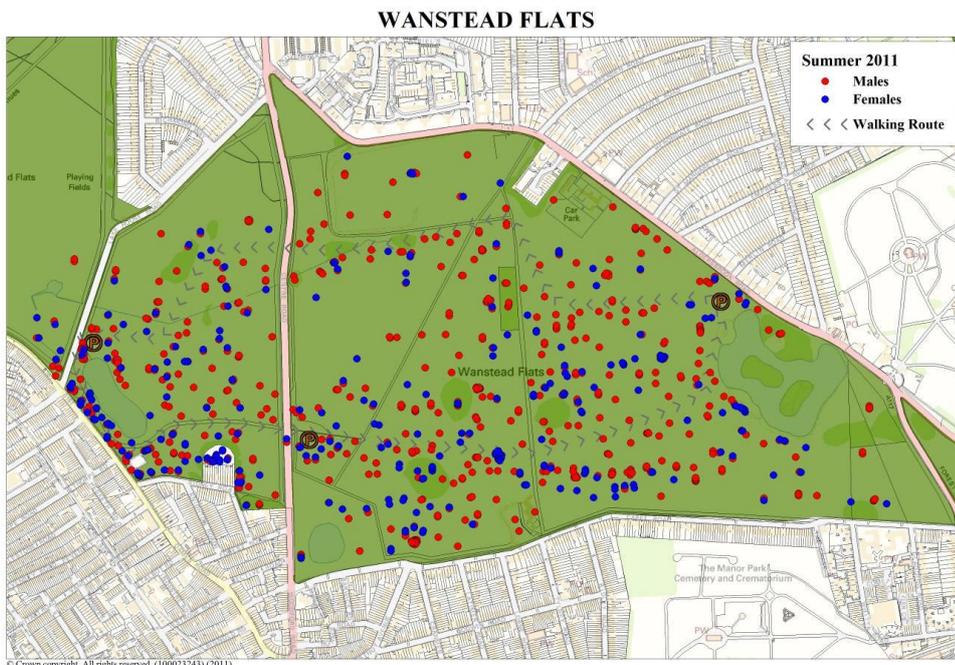

Fig 3 Cyclists at Fairmead

Figure 3 shows a clear concentration of cyclists along the rides to the west of the Fairmead area, and clusters of other users around Fairmead Oak and the Hill Wood tea hut.

Figure 4 shows both the scattered distribution of all users and females too, right across Wanstead Flats and even in the central section which is largely dominated by footballers throughout the year. A clear concentration of users around the southern and western shores of Jubilee Pond is also evident.

Fig 4 Gender patterns at Wanstead Flats

Detailed observation survey reports have been produced for each of the sites surveyed in 2011 and can be made available on request.

Who visits and who does not

Previous surveys have shown that those living within 2kms of the edge of the Forest comprise at least 95% of all visitors. Table 4 below describes the profile of the 435,408 people living within this catchment as calculated from the 2001 Census figures.

Table 4: The 2km Catchment Profile

	%
Male	49%
Female	51%
under 20s	27%
20-44	40%
45-65	21%
over 65	13%
White	65%
Mixed	3%
Asian	21%
Black	10%
Chinese/Other	2%
Disabled/limited by illness	16%

Two thirds of the 2km catchment population lived around the southern half of the Forest, as did two thirds of our 2011 questionnaire survey sample.

Table 5: Observation survey results - user profiles

	Gender split Male:Female	% visiting alone	% with a dog	Diversity
Bury Wood	52%:48%	19%	21%	Mainly White (95%) No disabled
Fairmead	72%:28%	14%	8%	Profile heavily skewed by high numbers of male bikers at the Hill Wood tea hut Low proportions of people from minority ethnic groups or with a disability
Hollow Pond	59%:41%	27%	9%	Fairly representative of the 2km catchment, except for the gender split in favour of males Some disabled users
Loughton Camp	59%:41%	16%	14%	Mainly White (87%) and low proportions of under 5s and over 65s No disabled
Lower Forest	71%:29%	28%	11%	Mainly White (97%) Popular with all ages and male anglers but low proportion of females No disabled
Wanstead Flats	70%:30%	28%	17%	More diverse than the surrounding population with a very high proportion of Black people (27%), a high proportion of under 20s but very low proportions of females and over 65s Some disabled users

Of the six sites surveyed in 2011, Hollow Pond and Wanstead Flats attracted the greatest diversity of visitors, comparable to the profile of people living within the 2km catchment. All the sites surveyed so far in the northern parts of the Forest have been dominated by visitors from White backgrounds, but then so too is the 2km catchment around these sites.

For wooded areas the fairly even split between males and females at Bury Wood and Loughton Camp is encouraging, as it suggests that women were not being put off from visiting these less well used parts of the Forest.

The low proportions of over 65s and the very low numbers of people with an observable disability at most of the 11 sites (other than at Connaught Water) is of concern, suggesting that the City ought to consider what more it might do to improve access for such people so that they too might enjoy the benefits that others do.

Car parking

The car parking figures in Table 6 indicate that there was generally sufficient capacity at most car parks throughout the summer of 2011 except at the Fairmead tea hut at weekends and at the various car parks around Hollow Pond.

Where people chose to go and how often

Between them, the 522 people who responded to the 2011 questionnaire survey visited virtually every part of the Forest (as did the 318 respondents in the 2010 survey).

The most popular destinations for the 2011 respondents were High Beach, Wanstead Park, Wanstead Flats, Chingford, Connaught Water and Epping - a similar pattern to that in 2010 (see Table 7). Comparing the questionnaire survey findings with those of the observation surveys, it is interesting to note that Hollow Ponds (observed to be the most visited site in 2011), comes out as only averagely visited in the questionnaire survey. This may reflect a bias in the higher numbers of questionnaires filled in at the sites with visitor centres (High Beach, Wanstead Park and Chingford Plain), so the observation survey results would seem to be a better guide of the popularity of sites.

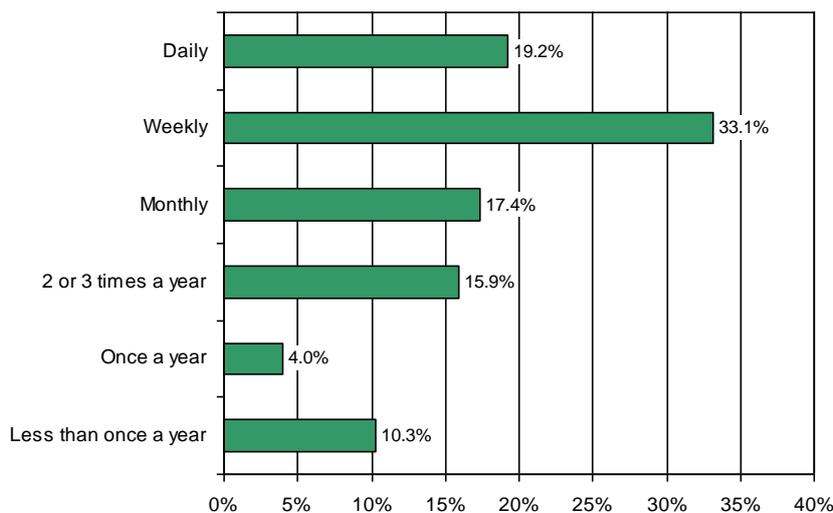

Queen Elizabeth's Hunting Lodge was popular and had been visited by 15% of the sample, compared to around 10% for each of the other two Visitor Centres (High Beach and The Temple).

Table 7: Questionnaire survey - the places people usually visit

Half of the 2011 survey respondents (compared to two thirds in 2010) visited the Forest frequently - either weekly or daily - including all ages and most of those with a disability and from BAME backgrounds (see Table 8). Visiting the Forest had clearly become a habit for our sample who we therefore assume know the places they visited well. More than half of the male respondents visited frequently, and slightly fewer than half the females.

Table 8: Questionnaire survey - frequency of visits

Just over half of the 2011 sample travelled less than 10 minutes to get into the Forest and of them the majority usually either drove or walked. As 71% of those who walked took less than 10 minutes to get into the Forest we can maintain our previous conclusion that the Forest, or at least its constituent parts, are used much in the same way as an urban park would be by those living within walking or cycling distance of them.

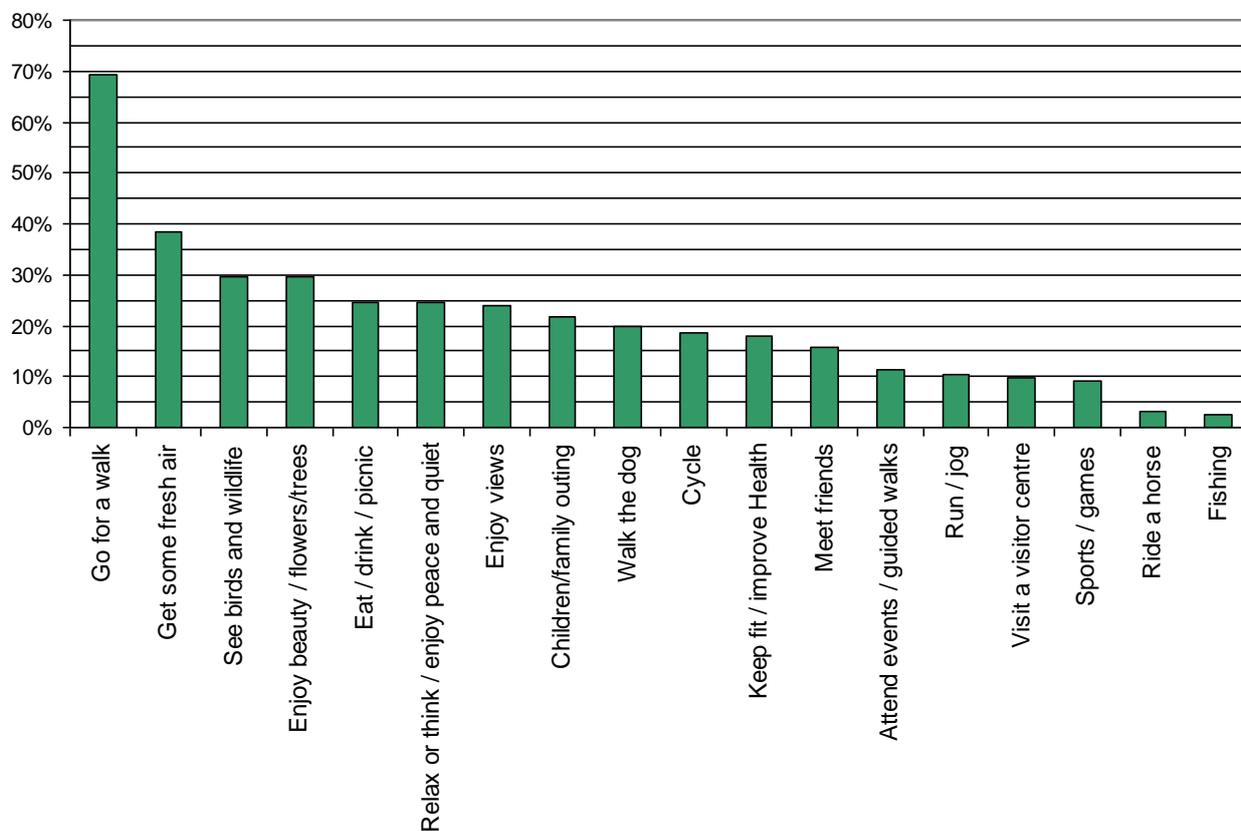

There were concentrations of people who usually walked to their chosen parts of the Forest to the south of Chingford Plain and around the sites in Wanstead; very few from the north and north eastern areas of the catchment usually walked.

Although only 49.3% (41.5% in 2010) of the whole sample usually used a car to get to the Forest, 77% of the over 65s were dependent on car travel. Between 2% and 5% of the sample usually travelled to the Forest by public transport (bus, tube or train). Only 1.5 % of the sample rode in on horseback. Some 10% of the sample (and of all ages) usually cycled to the Forest.

Why people visit Epping Forest

Not surprisingly and in line with past surveys, the majority of respondents normally went for a walk, to get some fresh air, enjoy the landscape and wildlife around them, to cycle, walk the dog or run. Eating/drinking/picnicking and cycling were more popular with males than females. Only 3% of the 2011 survey mentioned riding a horse. Between 20% and 25% of respondents (and females in particular) mentioned visiting with children, to eat/drink/picnic or to relax and think as the activities they normally engaged in.

Table 9: Questionnaire survey - what people say they do on a visit

Just under 10% of the sample engaged in sports and games.

Table 10: Observation survey - what people were observed to do on a visit

	Ambresbury Banks	Bury Wood	Chingford Plain	Connaught Water	Fairmead	High Beach & Pillow Mounds	Hollow Pond	Loughton Camp	Lower Forest	Wanstead Flats	Wanstead Park	Average %

Table 10 from the observation survey shows that walking and walking the dog were the most popular activities, followed by cycling and running at the six sites observed in 2011. Hollow Pond and Wanstead Flats (especially around Jubilee Pond) were popular for sitting, standing and taking in the view. Around half the visitors to Fairmead were observed sitting or standing around the tea hut car park.

Less than 5% of visitors were observed to be horse riding. High Beach, Wanstead Flats and Wanstead Park were the places where people frequently stopped to sit or stand and enjoy the view.

Satisfaction

First impressions of the Forest were very good, the majority of respondents (female and male) said they felt safe.

"We are so privileged to have this wonderful space to visit."

"We live in Victoria Park and have just discovered how easy it is to get to Epping Forest from us. We love it. Wish we had discovered it before."

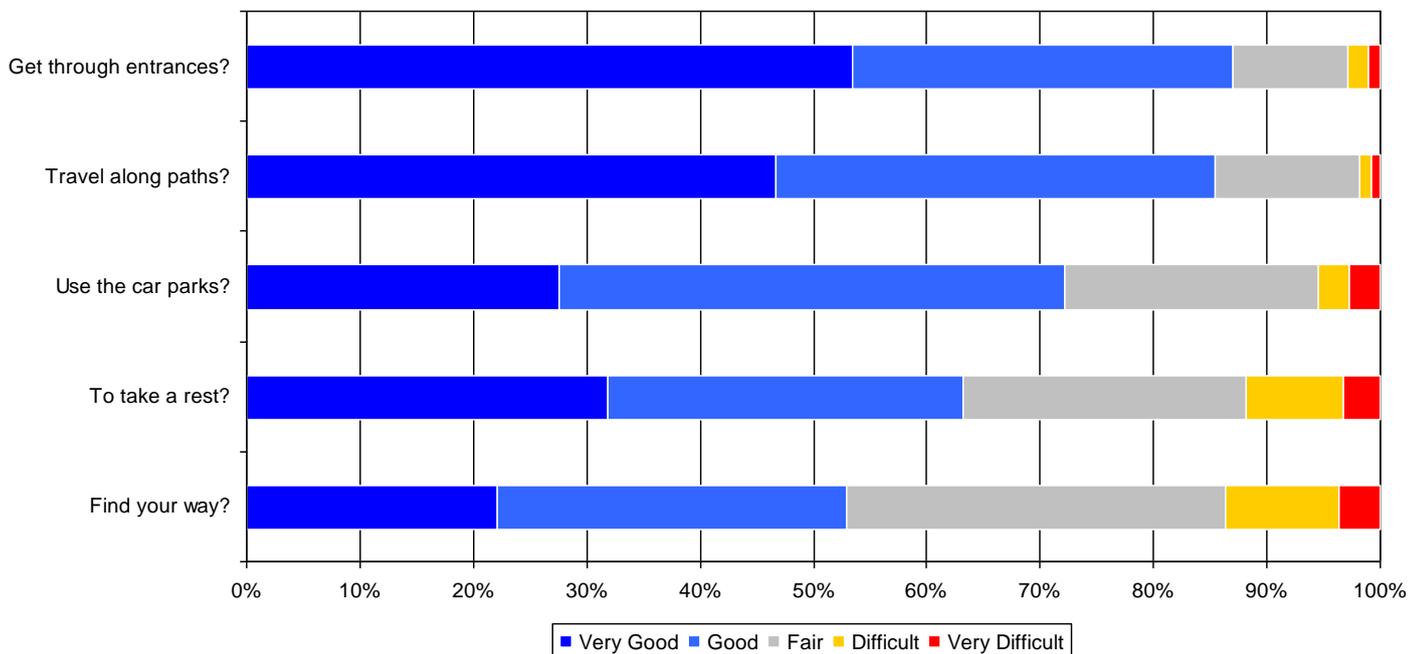

"The Hunting Lodge is excellent and staff very helpful and friendly."

"I love the guided walks. All Epping staff are always very friendly and helpful."

"Thank you for the work carried out over the last 10 years, especially the new trees."

Table 11: Access

When accessing the Forest, how easy is it for you to:

Accessing the Forest, even for frequent visitors, was still not as good as we might have expected. However, there was some indication of an improvement with only a quarter (compared to a third in 2010) considering access to be fair, difficult or very difficult. The lack of signage (an issue for all ages) and places to sit and rest seemed to be the key problems even at the most popular sites; entrances and the condition of paths less so.

Almost 70% (compared to only 18% in 2010) of respondents said they did not experience nuisance from other users. Of the rest, between 1% and 8% of respondents mentioned nuisance caused by dogs out of control, litter, cyclists, dog fouling or horse riders. The experience of nuisance was felt by

people from across the catchment, but we have no explanation for the welcome reduction in the visitor experience of nuisance in 2011.

"I feel that Wanstead Flats needs a dog warden and more dog bins in general. There is too much rubbish left by drinkers."

The facilities and services on offer in and around the Forest were generally rated well by these respondents though there was some indication that there was room to improve the offer on all (as in 2010) and for children and families in particular.

"How about a family trail?"

"Shame more kids not out during the summer holidays."

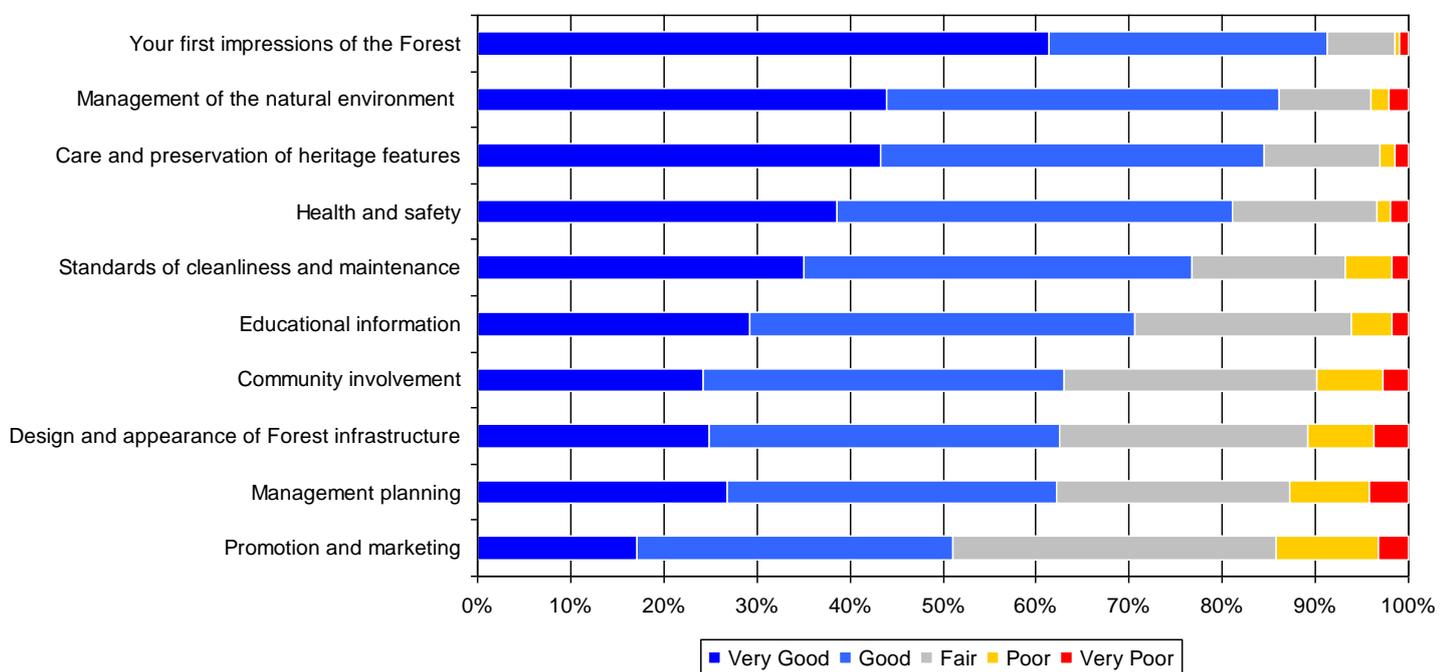

"As a regular user of the park to walk my dog I would like to cycle with my family. It would help us all to get some exercise."

"A wooden play area for Wanstead Park."

"Closing the car park at Aldersbrook is a seriously flawed strategy for coping with a few incidents. The rest of us have been punished for the careless actions of a few youths. WHY? Deal with the miscreants [do] not punish the law abiding users."

Table 12: Visitor satisfaction

How would you rate us on the following?

Suggestions to improve the visitor experience

It is difficult to make conclusive judgements about where people would like to see their suggested improvements but several respondents (and those living furthest away from the Forest in particular) requested:

- more refreshments facilities at Wanstead Park, Wanstead Flats, Connaught Water and High Beach
- more seats at all the most popular sites
- more directional signage at Wanstead Park, High Beach, Connaught Water and Wanstead Flats
- more facilities for children and families at Hollow Pond and Wanstead Flats
- more public transport from High Beach, Loughton and Theydon Bois

- better dog control at Wanstead Park and Wanstead Flats.

"Can the Wanstead Grotto be opened to the Public or at least the fences so that the view across the ornamental water can be appreciated?"

Whilst word of mouth was the most popular way people of all ages found out information about the Forest (as it had been in 2010) 23% used the website and 5% (and of all ages) used social media.

Continuing concerns

Whilst the vast majority of respondents expressed views that the Forest should be kept as natural as possible and not turned into a "*glorified park*", it was also clear that an ongoing lack of certain facilities and services was detracting from people's enjoyment of the Forest:

"More seats required."

"More toilets needed through the Forest and more children's playground activities."

"The AFA want cycling to be permitted across Wanstead Park from Northumberland Avenue to Warren Road on the existing vehicle path."

"Sanctioned bike events." [ie officially approved events]

There were requests by the anglers to clear the excessive weed from Perch Pond and Ornamental Water at Wanstead Park and for more notice about the availability of fishing at Theydon Pond.

There continued to be a keen appetite for community engagement in caring for and enjoying the Forest:

"Alexander Lake - bad rubbish not cleared enough. Happy to help out."

"Considering the Community Development has had a full time member of staff for several years now and that I live in the second most deprived estate within Epping Forest, I feel sad that I have never seen a poster on the Oakwood Hill Estate, or been leafleted or have heard ..."

"Please bring back the cows to Wanstead Flats. Happy to support any plans to do this."

For some requests there were as many in favour as against. In this category came the issue of signs:

"Sign posts are vital - more needed !!!"

"Please don't 'improve' the Forest with signs - it is great as it is."

Action

The results of the observation and questionnaire surveys have been fed back to CoL and into action plans for each of the six sites observed in 2011.

2012 Visitor Surveys

The questionnaire survey will be run again in 2012 and observation surveys will take place at:

Barn Hoppitt	Lords Bushes & Knighton Woods
Bushwood & Reservoir Wood	Pole Hill & Yardley Hill
Highams Park	Strawberry Hill Pond
